Heart of Lancaster
Medical Facility
Lititz, Pa.

Scope:
Mechanical and HVAC
systems and piping
installation

A section of the chilled water piping

Project Spotlight

Heart of Lancaster Medical Facility

Installation of Mechanical and HVAC Systems

When Health Management Associates chose Turner Construction to manage the construction of the new Heart of Lancaster Medical Facility, Turner turned to James CRAFT & Son to handle the extensive mechanical portion of the project.

CRAFT was responsible for installing "quick response/quick recovery" mechanical heating and air conditioning systems for the operating rooms, with each having its own dedicated unit Also installed were laminar flow diffusers with HEPA filtration that are continuously monitored by the factory to ensure HEPA clean air standards are met within the operating rooms.

Separate energy plant housing boilers, chillers and hot water heaters.

A key element in any hospital environment is the humidification. CRAFT coordinated and installed a MeeFog™ steam humidification system, which is unique in hospital environments but commonly found in amusement parks such as Disney World, where it provides the steam and fog for their rides and attractions.
