

# Project Profile

Franklin & Marshall College  
415 Harrisburg Avenue  
Lancaster, Pennsylvania

Scope:  
HVAC equipment replacement,  
and cooling and conditioning  
upgrades for a long-time,  
repeat customer

One of the thirteen HVAC units that CRAFT custom-built for the Barshinger Center at Franklin & Marshall College. Aluminum frames and cabinets prevent rust and corrosion, which is present in this moist environment.

A newly-installed HVAC unit for the college's greenhouse labs.

Above: New HVAC equipment being unloaded and lined up to descend into the 30-foot shaft.  
Inset: A section of a new air handling unit is lowered through the access shaft.

## Project Spotlight

# Franklin & Marshall College Summer Projects

Two HVAC Projects performed simultaneously for a long-time customer  
Lancaster, Pa.

Franklin & Marshall trusted James CRAFT & Son on these two challenging HVAC projects, which were performed simultaneously during the summer while students were off campus. Both jobs were estimated by Victor Vascellaro and managed by Jeff Ream.

### Steinman College Center - HVAC Equipment Replacement:

Our first challenge was disassembly of the existing HVAC equipment in the basement. It had to be cut it into pieces and removed through a shaft 30 feet deep that we created from the basement up to ground level. The new equipment sections, custom made to fit down the same shaft, were then lowered and positioned into place, where our CRAFTsmen assembled and hooked them up.

### Barshinger Center - Greenhouse Upgrades:

The other project completed during the 2012 summer involved upgraded cooling and conditioning capacity within the college's greenhouse labs. James CRAFT & Son supplied and installed thirteen HVAC units that were custom-built with aluminum frames and cabinets. This prevents rust and corrosion on the equipment within the greenhouse's moist environment.
