

## Project Profile

*Before: Old piping in the ceiling indicating severe corrosion.*

*After: New copper piping installed in the ceiling.*

Church of the Good Shepherd  
Camp Hill, PA  
Scope:  
Installation of hot and chilled  
water piping.

### *Project Spotlight*

## **Church of the Good Shepherd** *Hot & Chilled Water Piping Replacement*

**T**he James CRAFT & Son team was recommended to the Church of the Good Shepherd by another contractor who has serviced the building since it was built. The hot and chilled water piping had been in place for 40 years with improper insulation, which caused the piping to sweat when running chilled water for cooling. This caused the piping to corrode and repairs were becoming frequent and costly. So, the decision was made to replace all the piping throughout the building. We were contacted by the church as the contractor did not have the resources or manpower to take on a job of this size.

Many challenges were faced, the biggest of which was maintaining heat for the church during the project. Another challenge was completing the project by Easter Sunday, so cooling was available—which we DID accomplish. Our crews removed the old, black iron piping, installed new copper piping with ProPress fittings and reinsulated everything (properly this time)—all while minimizing the impact on the church and its operations. Randy Doxon served as our Project Manager, Dale Hager was the Lead Foreman, and the project was estimated by Roger Haugh and Andy Leh.
