

# Project Profile

*Intake and exhaust duct*

*Compressor duct*

*Scrap system exhaust duct*

Crown Cork & Seal  
Hanover, Pa.

Scope:  
Installation of process piping and  
duct systems.

## *Project Spotlight*

# **Crown Cork & Seal**

## *Piping and Duct Systems Installation*

*Hanover, PA*

**T**he James CRAFT & Son Team was contracted to provide piping and duct systems for Crown Cork & Seal's newly-expanded manufacturing plant in Hanover, Pennsylvania.

The piping and duct project included installing more than two-and-a-half miles of piping for various process piping systems, chilled water, coolant, gas, drain, deionized water, soft water, condensate, lacquer, and gear oil. The process piping systems required myriad stainless, carbon, galvanized, and plastic piping materials.

The project also included more than five tons of process duct systems for compressors, intake and exhaust, can scrap metals made from carbon steel, stainless steel, and galvanized steel.

This complex project required the James CRAFT Team to work very closely with the owners' representatives to carefully coordinate these systems as they connected to the owners' manufacturing equipment. This all has proven to be very successful as the owner has continued to employ our company for additional piping and duct work on more systems within the plant.

Our field labor and coordination efforts were meticulously led by Allan Jordan and Nate Cooper. A job well done by all on this challenging project!
